

# Package ‘rbtc’

September 12, 2018

**Title** Bitcoin API

**Version** 0.1-5

**Description** Implementation of the RPC-JSON API for Bitcoin and utility functions for address creation and content analysis of the blockchain.

**Depends** R (>= 3.4.0)

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 6.1.0

**Imports** methods, rjson, httr, openssl, gmp

**NeedsCompilation** no

**Author** Bernhard Pfaff [aut, cre]

**Maintainer** Bernhard Pfaff <bernhard@pfaffikus.de>

**Repository** CRAN

**Repository/R-Forge/Project** rbtc

**Repository/R-Forge/Revision** 7

**Repository/R-Forge/DateTimeStamp** 2018-09-06 18:39:17

**Date/Publication** 2018-09-12 15:10:07 UTC

 addnode

*RPC-JSON API: addnode*

---

## Description

Attempts to add or remove a node from the addnode list. Or try a connection to a node once.

## Usage

```
addnode(con, node, command = c("add", "remove", "onetry"))
```

**Arguments**

con	object of class CONRPC.
node	character the node (see <code>getpeerinfo()</code> for nodes).
command	character 'add' to add a node to the list, 'remove' to remove a node from the list, 'onetry' to try a connection to the node once.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#addnode>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

ANSRPC-class

*The ANSRPC class*

---

**Description**

This class definition is employed to cast the JSON-objects returned by API-calls to bitcoind.

**Slots**

rpcname	character the name of the API.
result	ANY the output/result of the API.
ecode	NullOrInteger the error code, in case of no error NULL.
emessage	NullOrIntegerCharacter the error message, in case of no error NULL.
id	character identifier to API-call.

**See Also**

Other bitcoind functions: [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

---

base58CheckDecode	<i>Base 58 binary-to-text-decoding</i>
-------------------	--

---

### Description

This is a modified binary-to-text decoding used for decoding Bitcoin addresses, aka *Base58Check*. If this is applied to a WIF address and the first and last four bytes are dropped, the result is the corresponding private key.

### Usage

```
base58CheckDecode(x)
```

### Arguments

x                    character, string in hex format.

### Value

list, the decoded elements of the string.

### Author(s)

Bernhard Pfaff

### References

base58CheckEncode      *Base 58 binary-to-text-encoding*

---

### Description

This is a modified binary-to-text encoding used for encoding Bitcoin addresses, aka *Base58Check*. If this is applied to an extended private key with its trailing check sum, then the result is the *Wallet Import Format*, (WIF).

### Usage

```
base58CheckEncode(x)
```

### Arguments

x                      character, string in hex format.

### Value

character, the encoded string.

### Author(s)

Bernhard Pfaff

### References

---

bkfee	<i>Compute fee in a block</i>
-------	-------------------------------

---

**Description**

This function returns the fee of the coinbase transaction. Hereby, the mining reward has been deducted. Initially, the mining reward was 50 BTC and is halved every 210,000 blocks.

**Usage**

```
bkfee(con, height)
```

**Arguments**

con	CONRPC, configuration object.
height	integer, the height of the block.

**Value**

numeric

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

---

blockattime	<i>Block height at time</i>
-------------	-----------------------------

---

**Description**

This function returns the block heights closest to a provided date/time (time zone is GMT).

**Usage**

```
blockattime(con, targetdate)
```

**Arguments**

con	CONRPC, configuration object.
targetdate	POSIXct, the date/time of closest block heights.

**Value**

data.frame: the heights, the times and the time differences (in minutes) to the provided date/time.

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

---

blockstats

*Obtaining statistics of a block*

---

**Description**

This function returns key statistics of a block's content, such as the time, the count of transactions, and summary statistics of the UTXOs.

**Usage**

```
blockstats(con, height, excoinbase = TRUE)
```

**Arguments**

con	CONRPC, configuration object.
height	integer, the block's height.
excoinbase	logical, whether coinbase transaction should be excluded (default is TRUE).

**Value**

An object of class data.frame

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

---

BTCADR-class

*S4 class BTCADR*

---

### Description

S4-class for BTC addresses, ordinarily created by a call to `createBtcAdr()`.

### Slots

`privkey` character, the private key.

`wif` character, the WIF.

`pubkey` character, the 512-bit public key.

`pubhash` character, the hashed public key.

`btcadr` character, the BTC address.

`mainnet` logical, whether mainnet or testnet.

### Author(s)

Bernhard Pfaff

### References

<https://en.bitcoin.it/wiki/Address>

### See Also

Other BtcAddresses: [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubHash2BtcAdr](#), [PubKey2PubHash](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [concatHex](#), [createBtcAdr](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

---

clearbanned

*RPC-JSON API: clearbanned*

---

### Description

Clear all banned IPs.

### Usage

`clearbanned(con)`

### Arguments

`con` object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#clearbanned>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

**See Also**

Other Network RPCs: [addnode](#), [disconnectnode](#), [getaddednodeinfo](#), [getconnectioncount](#), [getnettotals](#), [getnetworkinfo](#), [getpeerinfo](#), [listbanned](#), [ping](#), [setnetworkactive](#)

---

concatHex

*Concatenate two hex strings*

---

**Description**

This function concatenates two hex strings, provided without the 0x prefix, and returns a list object of the associated integers.

**Usage**

```
concatHex(hex1, hex2)
```

**Arguments**

hex1	character, a hex string.
hex2	character, a hex string.

**Value**

list

**Author(s)**

Bernhard Pfaff

**References**

**Examples**

```
h1 <- "80"  
h2 <- createPrivateKey()  
concatHex(h1, h2)
```

---

conrpc

*Extracting Configuration Settings*

---

**Description**

This function extracts information from the configuration file `bitcoin.conf` with respect to the options `rpcuser` and `rpcpassword`.

**Usage**

```
conrpc(conf.file)
```

**Arguments**

`conf.file`      character, the fully qualified path.

**Value**

An S4-object of class `CONRPC`.

**Author(s)**

Bernhard Pfaff

**See Also**

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

---

CONRPC-class	<i>The CONRPC class</i>
--------------	-------------------------

---

### Description

S4-class for curl connections to RPC-JSON.

### Details

The slots `rpcuse` and `rpcpwd` are required in the call to `curl`. Furthermore, the fully qualified path to `bitcoin.conf` (slot `config`) is required for starting and stopping `bitcoind` as daemon.

### See Also

Other bitcoind functions: [ANSRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

---

containsPoint	<i>containsPoint-methods</i>
---------------	------------------------------

---

### Description

Checks whether a point is on a defined elliptic curve.

### Usage

```
containsPoint(curve, x, y)
```

```
## S4 method for signature 'ECPARAM,bigz,bigz'
containsPoint(curve, x, y)
```

```
## S4 method for signature 'ECPARAM,integer,integer'
containsPoint(curve, x, y)
```

```
## S4 method for signature 'ECPARAM,character,character'
containsPoint(curve, x, y)
```

### Arguments

<code>curve</code>	an S4-object of class <code>ECPARAM</code> .
<code>x</code>	an S4-object of class <code>bigz</code> , the x-coordinate.
<code>y</code>	an S4-object of class <code>bigz</code> , the y-coordinate.

### Value

logical

**Author(s)**

Bernhard Pfaff

**References**<https://en.bitcoin.it/wiki/Secp256k1>**See Also**Other EllipticCurve: [ECPARAM-class](#), [ECPOINT-class](#), [EcpaamOrNull-class](#), [ecoperators](#), [ecparam](#), [ecpoint](#), [isNull](#)**Examples**

```
p <- "0xFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFC2F"
b <- "0x0000000000000000000000000000000000000000000000000000000000000007"
a <- "0x00000000000000000000000000000000000000000000000000000000000000"
curve256 <- ecparam(p, a, b)
Gx <- "0x79BE667EF9DCBBAC55A06295CE870B07029BFCDB2DCE28D959F2815B16F81798"

containsPoint(curve256, Gx, Gy)
```

createBtcAdr

*Create BTC addresses***Description**

This function creates an object of S4-class BTCADR.

**Usage**

```
createBtcAdr(privkey, mainnet = TRUE)
```

**Arguments**

privkey	character, a private key.
mainnet	logical, for which net the keys should belong to.

**Value**

Object of S4-class BTCADR

**Author(s)**

Bernhard Pfaff

**References**<https://en.bitcoin.it/wiki/Address>

**See Also**

Other BtcAddresses: [BTCADR-class](#), [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubHash2BtcAdr](#), [PubKey2PubHash](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [concatHex](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

---

createPrivateKey	<i>Creation of a private key</i>
------------------	----------------------------------

---

**Description**

Returns a random 256-bit private key in hex notation.

**Usage**

```
createPrivateKey()
```

**Value**

character.

**Author(s)**

Bernhard Pfaff

**References**

```
createPrivateKey()
```

---

date2int	<i>Convert date/time to integer</i>
----------	-------------------------------------

---

**Description**

This function returns the associated integer time for a given date/time object (coercible as POSIXct object).

**Usage**

```
date2int(x)
```

**Arguments**

x                    POSIXct, date/time object.

**Value**

integer

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

**Examples**

```
d <- "2017-03-15"  
date2int(d)
```

---

decodeHex	<i>Decoding of a hex string</i>
-----------	---------------------------------

---

**Description**

This function converts a hex string,, whereby the string must not contain the 0x prefix, to a list object with the associated integers as its elements.

**Usage**

```
decodeHex(s)
```

**Arguments**

s character, the hex string.

**Value**

list

**Author(s)**

Bernhard Pfaff

**References**

**Examples**

```
pk <- createPrivateKey()
decodeHex(pk)
```

---

decoderawtransaction *RPC-JSON API: decoderawtransaction*

---

**Description**

Return a JSON object representing the serialized, hex-encoded transaction.

**Usage**

```
decoderawtransaction(con, hexstring)
```

**Arguments**

con object of class CONRPC.  
hexstring character, the transaction hex string.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getblock>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

Other RawTransactions RPCs: [getrawtransaction](#)

---

decodescript

*RPC-JSON API: decodescript*

---

**Description**

The decodescript RPC decodes a hex-encoded P2SH redeem script.

**Usage**

```
decodescript(con, redeem)
```

**Arguments**

con	object of class CONRPC.
redeem	character, the P2SH.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

---

disconnectnode	<i>RPC-JSON API: disconnectnode</i>
----------------	-------------------------------------

---

### Description

Immediately disconnects from the specified peer node. Strictly one out of address and nodeid can be provided to identify the node.

### Usage

```
disconnectnode(con, address = NULL, nodeid = NULL)
```

### Arguments

con	object of class CONRPC.
address	character the IP address/port of the node.
nodeid	character The node ID (see <code>getpeerinfo()</code> for node IDs).

### Value

A S4-object of class ANSRPC.

### Author(s)

Bernhard Pfaff

### References

<https://bitcoin.org/en/developer-reference#disconnectnode>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

Other Network RPCs: [addnode](#), [clearbanned](#), [getaddednodeinfo](#), [getconnectioncount](#), [getnettotals](#), [getnetworkinfo](#), [getpeerinfo](#), [listbanned](#), [ping](#), [setnetworkactive](#)

**Description**

The following operations for EC points are available:

- doubleUp multiplying a point by itself
- +point addition
- leftmostBit highest bit value of an integer
- AND logical and-operator for two integers
- \*multiplication of an integer scalar with an EC point

**Usage**

```
doubleUp(ecp)

## S4 method for signature 'ECPOINT'
doubleUp(ecp)

## S4 method for signature 'ECPOINT,ECPOINT'
e1 + e2

leftmostBit(x)

## S4 method for signature 'bigz'
leftmostBit(x)

AND(x, y)

## S4 method for signature 'bigz,bigz'
AND(x, y)

## S4 method for signature 'ECPOINT,bigz'
e1 * e2

## S4 method for signature 'bigz,ECPOINT'
e1 * e2
```

**Arguments**

ecp	point on elliptic curve
e1	point on elliptic curve, or integer
e2	point on elliptic curve, or integer
x	integer
y	integer

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Secp256k1>

---

ecparam

*Creating objects of class ECPARAM*

---

**Description**

This function returns an object of S4-class ECPARAM, that does contain the parametrization of an elliptic curve.

**Usage**

```
ecparam(p, a, b)
```

**Arguments**

p	integer
a	integer
b	integer

**Value**

An object of S4-class ECPARAM

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Secp256k1>

**See Also**

b <- "0x0000000000000000000000000000000000000000000000000000000000000007"
a <- "0x00000000000000000000000000000000000000000000000000000000000000"
curve256 <- ecparam(p, a, b)
curve256
```

---

ECPARAM-class

*The ECPARAM class*

---

**Description**

S4-class for elliptic curve parameters. Objects of this class do contain the big integer parameters of elliptic curves. Instances of this class are ordinarily created by a call to `ecparam`

**Slots**

p bigz, curve dimension.  
a bigz, parameter.  
b bigz, parameter.

---

ecpoint

*Creating objects of class ECPOINT*

---

**Description**

This function returns an object of S4-class ECPOINT, that does represent a point on an elliptic curve.

**Usage**

```
ecpoint(ecparam = NULL, x, y, r = NULL)
```

**Arguments**

ecparam	integerECPARAM
x	x-coordinate, to be coercible to bigz.
y	y-coordinate, to be coercible to bigz.
r	the order of the base point.

**Value**

An object of S4-class ECPOINT

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Secp256k1>

**See Also**

Other EllipticCurve: [ECPARAM-class](#), [ECPOINT-class](#), [EcparamOrNull-class](#), [containsPoint](#), [ecoperators](#), [ecparam](#), [isNull](#)

**Examples**

```

p <- "0xFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFC2F"
b <- "0x0000000000000000000000000000000000000000000000000000000000000007"
a <- "0x00000000000000000000000000000000000000000000000000000000000000"
r <- "0xFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFEBAAEDCE6AF48A03BBFD25E8CD0364141"
x <- "0x79BE667EF9DCBBAC55A06295CE870B07029BFCD2DCE28D959F2815B16F81798"
y <- "0x483ada7726a3c4655da4fbfc0e1108a8fd17b448a68554199c47d08ffb10d4b8"
curve256 <- ecpParam(p, a, b)
ecp <- ecpoint(curve256, x, y, r)
ecp

```

---

 ECPOINT-class

*S4 Class ECPOINT*

---

**Description**

S4-class for a point on an elliptic curve. Ordinarily, objects are created by calling `ecpoint`.

**Slots**

```

ecparam ECPARAM
x bigz
y bigz
r bigz

```

**Author(s)**

Bernhard Pfaff

---

getaddednodeinfo      *RPC-JSON API: getaddednodeinfo*

---

### Description

Returns information about the given added node, or all added nodes (note that onetry addnodes are not listed here)

### Usage

```
getaddednodeinfo(con, node = NULL)
```

### Arguments

con	object of class CONRPC.
node	character the node (see <code>getpeerinfo()</code> for nodes).

### Value

A S4-object of class ANSRPC.

### Author(s)

Bernhard Pfaff

### References

<https://bitcoin.org/en/developer-reference#getaddednodeinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

### See Also

---

getbestblockhash      *RPC-JSON API: getbestblockhash*

---

### Description

Returns the hash of the best (tip) block in the longest blockchain.

### Usage

```
getbestblockhash(con)
```

**Arguments**

con                    object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getbestblockhash>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getblock

*RPC-JSON API: getblock*

---

**Description**

Returns information of a block hash. The returned level of details depends on the argument verbosity.

**Usage**

```
getblock(con, blockhash, verbosity = c("11", "10", "12"))
```

**Arguments**

con                    object of class CONRPC.  
 blockhash            character, the block hash.  
 verbosity            character, level of returned details.

**Value**

A S4-object of class ANSRPC.

Details If verbosity is '10', returns a string that is serialized, hex-encoded data for block 'hash'. If verbosity is '11' (the default), returns an object with information about block <hash>. If verbosity is '12', returns an object with information about block <hash> and information about each transaction.

**Author(s)**

Bernhard Pfaff

---

getblockchaininfo      *RPC-JSON API: getblockchaininfo*

---

**Description**

Returns an object containing various state info regarding blockchain processing.

**Usage**

```
getblockchaininfo(con)
```

**Arguments**

con                      object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

---

getblockcount	<i>RPC-JSON API: getblockcount</i>
---------------	------------------------------------

---

**Description**

Returns the number of blocks in the longest blockchain.

**Usage**

```
getblockcount(con)
```

**Arguments**

con                    object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getblockcount>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getblockhash	<i>RPC-JSON API: getblockhash</i>
--------------	-----------------------------------

---

**Description**

Returns hash of block in best-block-chain at height provided.

**Usage**

```
getblockhash(con, height)
```

**Arguments**

con	object of class CONRPC.
height	integer the height index.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getblockhash>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getblockheader

*RPC-JSON API: getblockheader*

---

**Description**

Returns the block header for a given hash string.

**Usage**

```
getblockheader(con, hash, verbose = TRUE)
```

**Arguments**

con	object of class CONRPC.
hash	character the block hash.
verbose	logical TRUE for a json object, FALSE for the hex encoded data.

**Value**

A S4-object of class ANSRPC.

**Details**

If verbose is false, returns a string that is serialized, hex-encoded data for blockheader 'hash'. If verbose is true, returns an Object with information about blockheader <hash>.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getblockheader>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getchaintips

*RPC-JSON API: getchaintips*

---

**Description**

Return information about all known tips in the block tree, including the main chain as well as orphaned branches.

**Usage**

```
getchaintips(con)
```

**Arguments**

con                    object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getchaintips>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

`getchaintxstats`*RPC-JSON API: getchaintxstats*

---

**Description**

Compute statistics about the total number and rate of transactions in the chain.

**Usage**

```
getchaintxstats(con, nblocks = NULL, blockhash = NULL)
```

**Arguments**

<code>con</code>	object of class CONRPC.
<code>nblocks</code>	integer optional, size of the window in number of blocks (default: one month).
<code>blockhash</code>	character optional, the hash of the block that ends the window.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getchaintxstats>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getconnectioncount      *RPC-JSON API: getconnectioncount*

---

**Description**

Returns the number of connections to other nodes.

**Usage**

```
getconnectioncount(con)
```

**Arguments**

con                      object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

---

getdifficulty              *RPC-JSON API: getdifficulty*

---

**Description**

Returns the proof-of-work difficulty as a multiple of the minimum difficulty.

**Usage**

```
getdifficulty(con)
```

**Arguments**

con                      object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

---

gethelp

*RPC-JSON API: Help*

---

**Description**

Returning information about RPC functions.

**Usage**

```
gethelp(con, rpc = "")
```

**Arguments**

con	object of class CONRPC.
rpc	character, name of RPC function.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#help>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getinfo

*RPC-JSON API: getinfo*

---

**Description**

Returning information about bitcoin configuration and settings.

**Usage**

```
getinfo(con)
```

**Arguments**

con                    object of class CONRPC.

**Details**

WARNING: getinfo is deprecated and will be fully removed in 0.16. Projects should transition to using `getblockchaininfo`, `getnetworkinfo`, and `getwalletinfo` before upgrading to 0.16.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

---

getmempoolancestors    *RPC-JSON API: getmempoolancestors*

---

### Description

If txid is in the mempool, returns all in-mempool ancestors.

### Usage

```
getmempoolancestors(con, txid, verbose = FALSE)
```

### Arguments

con	object of class CONRPC.
txid	character, the transaction id (must be in mempool).
verbose	logical, TrueTRUE for a json object, FALSE for array of transaction ids (default).

### Value

A S4-object of class ANSRPC.

### Author(s)

Bernhard Pfaff

### References

---

getmempooldescendants *RPC-JSON API: getmempooldescendants*

---

### Description

If txid is in the mempool, returns all in-mempool descendants.

### Usage

```
getmempooldescendants(con, txid, verbose = FALSE)
```

### Arguments

con	object of class CONRPC.
txid	character, the transaction id (must be in mempool).
verbose	logical, TrueTRUE for a json object, FALSE for array of transaction ids (default).

### Value

A S4-object of class ANSRPC.

### Author(s)

Bernhard Pfaff

---

getmempoolentry	<i>RPC-JSON API: getmempoolentry</i>
-----------------	--------------------------------------

---

### Description

Returns mempool data for given transaction.

### Usage

```
getmempoolentry(con, txid)
```

### Arguments

con	object of class CONRPC.
txid	character, the transaction id (must be in mempool).

### Value

A S4-object of class ANSRPC.

### Author(s)

Bernhard Pfaff

---

getmempoolinfo	<i>RPC-JSON API: getmempoolinfo</i>
----------------	-------------------------------------

---

**Description**

Returns details on the active state of the TX memory pool.

**Usage**

```
getmempoolinfo(con)
```

**Arguments**

con                   object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

---

getnettotals	<i>RPC-JSON API: getnettotals</i>
--------------	-----------------------------------

---

**Description**

Returns information about network traffic, including bytes in, bytes out, and current time.

**Usage**

```
getnettotals(con)
```

**Arguments**

con                    object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

getnetworkinfo

*RPC-JSON API: getnetworkinfo*

---

**Description**

Returns an object containing various state info regarding P2P networking.

**Usage**

```
getnetworkinfo(con)
```

**Arguments**

con                    object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getnetworkinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getpeerinfo

*RPC-JSON API: getpeerinfo*

---

**Description**

Returns data about each connected network node as a json array of objects.

**Usage**

```
getpeerinfo(con)
```

**Arguments**

con                   object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#getpeerinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

getrawmempool	<i>RPC-JSON API: getrawmempool</i>
---------------	------------------------------------

---

### Description

Returns all transaction ids in memory pool as a json array of string transaction ids. Hint: use `getmempoolentry` to fetch a specific transaction from the mempool.

### Usage

```
getrawmempool(con, verbose = TRUE)
```

### Arguments

<code>con</code>	object of class <code>CONRPC</code> .
<code>verbose</code>	logical, TRUE for a json object, FALSE for array of transaction ids

### Value

A S4-object of class `ANSRPC`.

### Author(s)

Bernhard Pfaff

### References

<https://bitcoin.org/en/developer-reference#getrawmempool>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

### See Also

Other Blockchain RPCs: [decodescript](#), [getbestblockhash](#), [getblockchaininfo](#), [getblockcount](#), [getblockhash](#), [getblockheader](#), [getblock](#), [getchaintips](#), [getchaintxstats](#), [getdifficulty](#), [getmempoolancestors](#), [getmempooldescendants](#), [getmempoolentry](#), [getmempoolinfo](#), [gettxoutproof](#), [gettxoutsetinfo](#), [gettxout](#), [preciousblock](#), [pruneblockchain](#), [verifychain](#), [verifytxoutproof](#)

---

getrawtransaction      *RPC-JSON API: getrawtransaction*

---

## Description

Returns the raw transaction data.

## Usage

```
getrawtransaction(con, txid, verbose = FALSE)
```

## Arguments

con	object of class CONRPC.
txid	character, the transaction id.
verbose	logical, type of output.

## Value

A S4-object of class ANSRPC.

Details By default this function only works for mempool transactions. If the `-txindex` option is enabled, it also works for blockchain transactions. **DEPRECATED:** for now, it also works for transactions with unspent outputs. If `verbose` is `'true'`, returns an object with information about `'txid'`. If `verbose` is `'false'` or omitted, returns a string that is serialized, hex-encoded data for `'txid'`.

## Author(s)

Bernhard Pfaff

## References

<https://bitcoin.org/en/developer-reference#getblock>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

Other RawTransactions RPCs: [decoderawtransaction](#)

---

gettxout

*RPC-JSON API: gettxout*

---

### Description

Returns details about an unspent transaction output.

### Usage

```
gettxout(con, txid, n, incmempool = TRUE)
```

### Arguments

con	object of class CONRPC.
txid	character the transaction id.
n	integer vout number.
incmempool	logical whether to include the mempool (default TRUE).

### Details

Note that an unspent output that is spent in the mempool won't appear.

### Value

A S4-object of class ANSRPC.

### Author(s)

Bernhard Pfaff

### References

<https://bitcoin.org/en/developer-reference#gettxout>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

### See Also

Other Blockchain RPCs: [decodescript](#), [getbestblockhash](#), [getblockchaininfo](#), [getblockcount](#), [getblockhash](#), [getblockheader](#), [getblock](#), [getchaintips](#), [getchaintxstats](#), [getdifficulty](#), [getmempoolancestors](#), [getmempooldescendants](#), [getmempoolentry](#), [getmempoolinfo](#), [getrawmempool](#), [gettxoutproof](#), [gettxoutsetinfo](#), [preciousblock](#), [pruneblockchain](#), [verifychain](#), [verifytxoutproof](#)

---

gettxoutproof                      *RPC-JSON API: gettxoutproof*

---

### Description

Returns a hex-encoded proof that "txid" was included in a block.

### Usage

```
gettxoutproof(con, txids, blockhash = NULL)
```

### Arguments

con	object of class CONRPC.
txids	character a json array of txids to filter.
blockhash	integer looks for txid in the block with this hash, (optional, default NULL).

### Details

NOTE: By default this function only works sometimes. This is when there is an unspent output in the utxo for this transaction. To make it always work, you need to maintain a transaction index, using the -txindex command line option or specify the block in which the transaction is included manually (by blockhash).

### Value

A S4-object of class ANSRPC.

---

gettxoutsetinfo      *RPC-JSON API: gettxoutsetinfo*

---

### Description

Returns statistics about the unspent transaction output set. Note this call may take some time.

### Usage

```
gettxoutsetinfo(con)
```

### Arguments

con                    object of class CONRPC.

### Value

A S4-object of class ANSRPC.

### Author(s)

Bernhard Pfaff

### References

<https://bitcoin.org/en/developer-reference#gettxoutsetinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

### See Also

---

getwalletinfo      *RPC-JSON API: getwalletinfo*

---

### Description

Returning information about bitcoin wallet.

### Usage

```
getwalletinfo(con)
```

**Arguments**

con                    object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

---

hash160

*BTC hash160*

---

**Description**

This function returns the hash by applying the sha256 hashing first and then to the resulting hash the ripemd160 algorithm.

**Usage**

hash160(d)

**Arguments**

d                    raw, vector.

**Value**

character, the value of d hashed with sha256 and ripemd160.

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Address>

---

hash256

*BTC hash256*

---

**Description**

This function returns the hash by applying the sha256 hashing algorithm twice to a raw object.

**Usage**

```
hash256(d)
```

**Arguments**

d                      raw, vector.

**Value**

character, the value of d hashed twice.

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Address>

---

int2date	<i>Convert time stamp to POSIX</i>
----------	------------------------------------

---

### Description

This function returns the associated POSIXct time to the time stamp integer in a block header.

### Usage

```
int2date(x)
```

### Arguments

x                    integer, the block header time stamp

### Value

An object of class POSIXct, POSIXt

### Author(s)

Bernhard Pfaff

### References

[https://en.bitcoin.it/wiki/Block\\_timestamp](https://en.bitcoin.it/wiki/Block_timestamp)

### Examples

```
ts <- 1532954868
int2date(ts)
```

---

intMaxDay	<i>Integer representation of a day-end</i>
-----------	--

---

**Description**

This function returns the associated integer time for the end of a specific day (*i.e.*, 23:59:59 time).

**Usage**

```
intMaxDay(x)
```

**Arguments**

x                    POSIXct, date/time object.

**Value**

integer

**Examples**

```
d1 <- "2017-03-15"  
d1 <- intMaxDay(d1)  
d2 <- "2017-03-15 23:59:59"  
d2 <- intMaxDay(d2)  
identical(d1,d2)
```

---

intMinDay	<i>Integer representation of a day-begin</i>
-----------	--

---

**Description**

This function returns the associated integer time for the start of a specific day (*i.e.*, 00:00:00 time).

**Usage**

```
intMinDay(x)
```

**Arguments**

x                    POSIXct, date/time object.

**Value**

integer

**Author(s)**

Bernhard Pfaff

```
d1 <- "2017-03-15"  
d1 <- intMinDay(d1)  
d2 <- "2017-03-15 00:00:00"  
d2 <- intMinDay(d2)  
identical(d1,d2)
```

---

<code>intRangeDay</code>	<i>Integer range within a day</i>
--------------------------	-----------------------------------

---

**Description**

This function returns the associated integer times for the start and end of a specific day.

**Usage**

```
intRangeDay(x)
```

**Arguments**

x                    POSIXct, date/time object.

**Value**

integer

**Author(s)**

Bernhard Pfaff

**See Also**

**Examples**

```
d1 <- "2017-03-15"  
intRangeDay(d1)  
intMinDay(d1)  
intMaxDay(d1)
```

---

intRangePeriod	<i>Integer range between two dates</i>
----------------	--

---

**Description**

This function returns the associated integer times for the start of date d1 and the end of date d2.

**Usage**

```
intRangePeriod(d1, d2)
```

**Arguments**

d1	POSIXct, date/time object.
d2	POSIXct, date/time object.

**Value**

integer

**Author(s)**

Bernhard Pfaff

d1 <- "2017-03-15"  
d2 <- "2017-04-15"  
intRangePeriod(d1, d2)  
intMinDay(d1)  
intMaxDay(d2)
```

---

isNull	<i>Test for empty EC point</i>
--------	--------------------------------

---

**Description**

Checks whether an EC point does exist.

**Usage**

```
isNull(x)
```

```
## S4 method for signature 'ECPOINT'  
isNull(x)
```

**Arguments**

x            object

**Value**

logical

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Secp256k1>

---

listbanned	<i>RPC-JSON API: listbanned</i>
------------	---------------------------------

---

**Description**

List all banned IPs/Subnets.

**Usage**

```
listbanned(con)
```

**Arguments**

con                    object of class CONRPC.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#listbanned>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [conrpc](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

---

ping	<i>RPC-JSON API: ping</i>
------	---------------------------

---

**Description**

Requests that a ping be sent to all other nodes, to measure ping time. Results provided in `getpeerinfo`, `pingtime` and `pingwait` fields are decimal seconds. Ping command is handled in queue with all other commands, so it measures processing backlog, not just network ping.

**Usage**

```
ping(con)
```

**Arguments**

con	object of class CONRPC.
-----	-------------------------

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#ping>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

preciousblock	<i>RPC-JSON API: preciousblock</i>
---------------	------------------------------------

---

**Description**

Treats a block as if it were received before others with the same work. A can override the effect of an earlier one. The effects of `preciousblock` are not retained across restarts.

**Usage**

```
preciousblock(con, blockhash)
```

**Arguments**

con                    object of class CONRPC.  
 blockhash            character, the hash of the block to mark as precious.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#preciousblock>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

 PrivKey2PubKey

*Create public key from private key*

---

**Description**

This function creates the 512-bit public key corresponding to a private key.

**Usage**

```
PrivKey2PubKey(privkey, mainnet = TRUE)
```

**Arguments**

privkey                character, the private key.  
 mainnet                logical, whether the WIF should correspond to the mainnet or testnet.

**Value**

character, the public key.

**Author(s)**

Bernhard Pfaff

---

PrivKey2Wif	<i>Create WIF from a private key</i>
-------------	--------------------------------------

---

## Description

Returns the corresponding WIF key from a private key

## Usage

```
PrivKey2Wif(privkey, mainnet = TRUE)
```

## Arguments

privkey	character, a private key.
mainnet	logical, whether the WIF should correspond to the mainnet or testnet.

## Value

character, the WIF key

## Author(s)

Bernhard Pfaff

## Examples

```
pk <- createPrivateKey()  
PrivKey2Wif(pk)
```

---

pruneblockchain	<i>RPC-JSON API: pruneblockchain</i>
-----------------	--------------------------------------

---

**Description**

Pruning of blockchain.

**Usage**

```
pruneblockchain(con, height)
```

**Arguments**

con	object of class CONRPC.
height	integer The block height to prune up to.

**Value**

A S4-object of class ANSRPC.

**Details**

May be set to a discrete height, or a unix timestamp to prune blocks whose block time is at least 2 hours older than the provided timestamp.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#pruneblockchain>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

---

PubHash2BtcAdr            *Create BTC address from public key hash*

---

**Description**

This function returns the corresponding BTC address from a hashed public key.

**Usage**

```
PubHash2BtcAdr(pubhash)
```

**Arguments**

pubhash            character, the public key hash.

**Value**

character, the BTC address

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Address>

---

PubKey2PubHash            *Create public key hash from 512-bit public key*

---

**Description**

This function returns the associated public key hash from a 512-bit public key by using the hash160() function.

**Usage**

```
PubKey2PubHash(pubkey, mainnet = TRUE)
```

**Arguments**

pubkey            character, the public key.  
 mainnet          logical, whether the WIF should correspond to the mainnet or testnet.

**Value**

character, the hash of a public key

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Address>

**See Also**

Other BtcAddresses: [BTCADR-class](#), [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubHash2BtcAdr](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [concatHex](#), [createBtcAdr](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

---

rpcpost

*HTTP post of RPC-JSON*

---

**Description**

This function executes an RPC-JSON post.

**Usage**

```
rpcpost(con, api, plist = list())
```

**Arguments**

con                CONRPC object, returned from conrpc().  
 api                character the name of the RPC function.  
 plist              list a named list object of the parameters for api

**Value**

A list object, coerced JSON answer from RPC.

**Author(s)**

Bernhard Pfaff

**See Also**

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [startbtc](#), [stopbtc](#)

---

setnetworkactive      *RPC-JSON API: setnetworkactive*

---

**Description**

Disable/enable all p2p network activity.

**Usage**

```
setnetworkactive(con, state = TRUE)
```

**Arguments**

con	object of class CONRPC.
state	logical the network state.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

**References**

<https://bitcoin.org/en/developer-reference#setnetworkactive>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

**See Also**

---

show	<i>show-methods</i>
------	---------------------

---

**Description**

Defined show-methods for S4-classes.

**Usage**

```
## S4 method for signature 'ANSRPC'
show(object)

## S4 method for signature 'BTCADR'
show(object)

## S4 method for signature 'ECPARAM'
show(object)
```

**Arguments**

object            a S4-class object.

---

startbtc	<i>Start bitcoind server process</i>
----------	--------------------------------------

---

**Description**

This function does start the bitcoind-server process. It should only be called when no suitable RPC-JSON process is running

**Usage**

```
startbtc(confbtc)
```

**Arguments**

confbtc            CONRPC object, returned from conrpc().

**Details**

The process is started by calling `system()`. Hereby, the options: `rpcuser`, `rpcpassword` and `conf` are used in the call to `bitcoind`.

**Value**

NULL

**Author(s)**

Bernhard Pfaff

**See Also**

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [stopbtc](#)

---

stopbtc	<i>Stop bitcoind server process</i>
---------	-------------------------------------

---

**Description**

This function stops a running bitcoind process. It calls `bitcoin-cli stop` via the R function `system()`.

**Usage**

```
stopbtc(confbtc)
```

**Arguments**

`confbtc` CONRPC object, returned from `conrpc()`.

**Author(s)**

Bernhard Pfaff

**See Also**

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [startbtc](#)

---

timeofblock	<i>Time of a block</i>
-------------	------------------------

---

**Description**

This function returns the time of a block in GMT.

**Usage**

```
timeofblock(con, height)
```

**Arguments**

con            CONRPC, configuration object.  
height        integer, the height of the block.

**Value**

POSIXct

**Author(s)**

Bernhard Pfaff

**See Also**

---

txfee	<i>Compute fee of a transaction</i>
-------	-------------------------------------

---

**Description**

This function returns the implicit fee of a transaction, by computing the difference between the sum of its inputs and the sum of its outputs.

**Usage**

```
txfee(con, txid)
```

**Arguments**

con            CONRPC, configuration object.  
txid           character, the id of the transaction.

**Value**

numeric

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

---

txids	<i>Retrieve TX Ids in block</i>
-------	---------------------------------

---

**Description**

This function retrieves the transaction IDs in a block.

**Usage**

```
txids(con, height, excoinbase = TRUE)
```

**Arguments**

con	CONRPC, configuration object.
height	integer, the block's height.
excoinbase	logical, whether coinbase transaction should be excluded (default is TRUE).

**Value**

character

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

---

txinids	<i>Retrieving the input transaction IDs</i>
---------	---

---

**Description**

This function returns the transaction IDs of the inputs for a given transaction.

**Usage**

```
txinids(con, txid)
```

**Arguments**

con	CONRPC, configuration object.
txid	character, the id of the transaction.

**Value**

data.frame, the transaction ID(s) and the position(s) of the previous UTXO(s).

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

---

txstats

*Statistics of a transaction*

---

**Description**

This function returns key statistics/characteristics of a transaction.

**Usage**

```
txstats(con, txid)
```

**Arguments**

con	CONRPC, configuration object.
txid	character, the id of the transaction.

**Value**

data.frame

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [utxoage](#), [utxotype](#), [utxovalue](#)

---

utxoage	<i>Age of UTXOs</i>
---------	---------------------

---

**Description**

This function returns a `difftime` object measuring the elapsed time(s) between the UTXO(s) in a transaction and its input(s) (previous UTXO(s)).

**Usage**

```
utxoage(con, txid, units = c("auto", "secs", "mins", "hours", "days",  
"weeks"))
```

**Arguments**

<code>con</code>	CONRPC, configuration object.
<code>txid</code>	character, the id of the transaction.
<code>units</code>	character, the time difference units; passed to <code>difftime()</code> .

**Value**

`difftime`

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxotype](#), [utxovalue](#)

---

utxotype	<i>Retrieving types of UTXOs</i>
----------	----------------------------------

---

**Description**

This function returns the types of the UTXO(s) in a transaction.

**Usage**

```
utxotype(con, txid)
```

**Arguments**

con            CONRPC, configuration object.  
txid           character, the id of the transaction.

**Value**

character

**Author(s)**

Bernhard Pfaff

**See Also**

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxovalue](#)

---

utxovalue

*Retrieving values of UTXOs*

---

**Description**

This function returns the values of UTXO(s) in a transaction.

**Usage**

utxovalue(con, txid)

**Arguments**

con            CONRPC, configuration object.  
txid           character, the id of the transaction.

**Value**

numeric

**Author(s)**

Bernhard Pfaff

---

`validBtcAdr`*Validate S4-class BTCADR*

---

**Description**

This function validates objects of S4-class BTCADR. Hereby, checks are conducted with respect to the first character of the addresses; their consistency with the net version and the correspondence of the checksums.

**Usage**

```
validBtcAdr(object)
```

**Arguments**

object            BTCADR object

**Author(s)**

Bernhard Pfaff

**References**

<https://en.bitcoin.it/wiki/Address>

---

`verifychain`*RPC-JSON API: verifychain*

---

**Description**

Verifies blockchain database.

**Usage**

```
verifychain(con, checklevel = NULL, nblocks = NULL)
```

**Arguments**

con	object of class CONRPC.
checklevel	integer (optional, 0-4, default=3), how thorough the block verification is. a json array of txids to filter.
nblocks	integer (optional, default=6, 0=all), the number of blocks to check.

**Value**

A S4-object of class ANSRPC.

**Author(s)**

Bernhard Pfaff

---

verifytxoutproof	<i>RPC-JSON API: verifytxoutproof</i>
------------------	---------------------------------------

---

**Description**

Verifies that a proof points to a transaction in a block, returning the transaction it commits to and throwing an RPC error if the block is not in our best chain.

**Usage**

```
verifytxoutproof(con, proof)
```

**Arguments**

con	object of class CONRPC.
proof	character the hex-encoded proof generated by <code>gettxoutproof</code> .

**Value**

A S4-object of class ANSRPC.

---

Wif2PrivKey

*Create private key from WIF*

---

**Description**

Returns the corresponding private key from a WIF key.

**Usage**

Wif2PrivKey(wif)

**Arguments**

wif                    character, a WIF key.

**Value**

character, the corresponding private key.

**Author(s)**

Bernhard Pfaff
